

Autonomous

A technological innovation, only sunlight is required to obtain full power.

Using photo-voltaic cells equipped with the tried and tested SuperCap technology, **Sunis WireFree RTS** is battery-free and maintenance-free. For a long time.

> *Photo-voltaic cell, autonomous for 24 hours*

> *Sunshine sensor with adjustable sensitivity*

Sunshine brought under control

Sunis Wirefree RTS sun sensor

New!

HOME
MOTION BY

somfy

Clever

When using **Sunis WireFree RTS**, the solar protection devices in the home automatically react to the adjusted solar radiation threshold all year round.

The new Somfy solar sensor is wireless, operates without batteries, and is 100% autonomous.

Clever, isn't it?

Exterior Venetian blinds are lowered with their slats set at 45° to protect the inside of the house from the sun.

Roller shutters are lowered half open to provide the house with natural ventilation.

Awnings extend to protect the terrace from the sun.

Interior blinds are lowered in order to prevent glare when the sun is going down.

Design

Discrete, compact and wireless, **Sunis WireFree RTS** can be positioned wherever you want, in harmony with your façade.

Easy

The sensitivity to sunshine can be set and re-set at all times, in just a few minutes and without using tools. **Sunis WireFree RTS** can be put onto or removed from its wall mounting plate in a matter of seconds.

- > Can be positioned anywhere
- > No batteries
- > Adjustable sensitivity
- > Simple mounting
