Switch Series Corlo

High quality materials and elegant design

WS1 Style

Corlo M2-T

Corlo adapts to the room

Real glass surfaces and chrome plated metal frames make the push buttons and power outlets of *System Corlo* a highlight of high class interiors.

The frames of the switch series are available with a matt or glossy finish, custom colours for an individual interior design are also possible. For push button and power outlet, you have a choice of white or black glass surfaces.

Corlo Push Button M-T

Single or double push buttons have an integrated room temperature sensor. The temperature value can be interpreted by the display Corlo Touch KNX. The push buttons are suited for the control systems WS1 and WS1000, for conventional electrical installation, relay controls and PLC.

Corlo Wireless Push Button P RF

The push buttons receive their energy for sending wireless signals through integrated solar cells. The solar power is stored in an energy buffer, so the additionally included lithium battery only needs to step in during a longer absence of daylight. The push buttons are suited for the control systems WS1 and WS1000, Solexa, Arexa and direct manual control of all devices using the Elsner wireless protocol RF (e. g. ventilation units, relays, motor control units). The special frames *Corlo Plan* can be mounted without a socket directly on the wall.

Corlo Power Outlet

The *System Corlo* is completed by a matching power outlet. An integrated increased contact protection makes the SCHUKO power outlet child-proof.
